As the world becomes more modern and the people of this world become more time conscious, everything nowadays has moved towards online. Our project is an online doctor finder website, which will help the users to see every detail about the doctor through online. As a result, it will save their time as they don't need to go to the hospital to find the details. In our app, we have a scheduler by which users can book their time and if one user books a time then that particular time will not be shown for other users. Which will save their time. Moreover, users can pay through online and even they can see their records online.
